SUBJECT INDEX

Aachen-Bonn-London-Oxford-Saclay collaboration (B.E.B.C.) 41, 69
Aachen-C.E.R.N.-Frascati-Hamburg-Moscow-Napoli-Roma collaboration 41, 69
Aachen-Padova experiment 41, 56
Alternative forms for the kinetic energy *see* Jastrow energy
Antisymmetry in nuclear matter 89, 121–124, 136, 140, 164, 165
Argonne National Laboratory 41, 61
Articulation point, definition of 130
Asymptotically free theories 2, 22–25, 27
Atmosphere 201, 204, 217–218
Atomic parity violation 77
Aviles-Hartogh-Tolhoek (A.H.T.) cluster theory 102

Background particles 8
Baker-Hind-Kahane potential *see* Two nucleon potential
Baryon production 21
Baryonic abundances in neutron star matter *see* Neutron star
Baryonic soup 201, 227–229
Basic diagram, definition of 146
  modification for K.R. scheme 159
β-stable nucleon matter 201, 222–224, 230
Bethe-Faddeev theory 92, 117, 119, 122
Bethe-Goldstone wave function 92, 93, 101, 117, 122, 183
Bethe-Johnson potential *see* Two nucleon potential
Bjorken limit 22
Bjorken scaling *see* Scaling
Black dwarf stars 202, 203
Black holes 202
Bressel-Kerman-Rouben potential *see* Two nucleon potential
Brookhaven Alternate Gradient Synchrotron (A.G.S.) 41, 57
Brueckner-Bethe theory 89, 92–94, 100, 220, 222
  comparison with Jastrow theory 89, 113–124, 168–182, 189–194
Bubble chamber
  7 foot 41, 57
  15 foot 41, 66

Caltech-Fermilab (C.I.T.F.) collaboration 41, 45, 50, 62, 63, 67
C.E.R.N. Proton Synchrotron (P.S.) 41, 56
C.E.R.N. Super Proton Synchrotron (S.P.S.) 41, 67
C.E.R.N.-Dortmund-Heidelberg-Saclay (C.D.H.S.) collaboration 41, 67
Charge ratios 9
Charged current (C.C.) 42, 45, 46, 50, 55, 64, 66–68, 71, 76
Charm 43, 44, 53, 72
Charm production 21, 24
Clark-Feenberg separation method (C.F.) *see* Jastrow energy
Clark-Westhaus Cluster analysis (C.W.) *see* Jastrow energy
Cluster development of energy expectation values 89, 95–102
  see also Jastrow energy
  Factorized Iwamoto-Yamada (F.I.Y.) expansion 100–104, 108, 109, 112, 113–123, 124–140, 156, 162, 171, 189, 190
  Iwamoto-Tamada (I.Y.) expansion 100, 101, 109, 113, 135, 140, 187
Cluster expansion of the Jastrow energy 89, 105–108
  see also Jastrow energy
Cluster expansion theory 89, 93, 94–105, 110, 112, 113–116, 121, 123, 149, 154, 168, 187
  see also Diagrammatic cluster expansions
Cluster model 15
Coester's commandment 118, 162
Collapsed (or superdense) nuclei 247, 248
Columbia-Illinois-Rockefeller (C.I.R.) collaboration 41, 60, 70
Composite-particle production in heavy ion collisions 276
Confusion theorem 73
Connectivity 89, 129–131
Conserved Vector Current (C.V.C.) 42
Constituent scattering *see* Empirical constituent scattering
Constituent scattering models 22
Correlated basis functions 90, 183, 187, 188, 190, 192, 193
Correlated wave functions 89, 93–95, 109, 182
Correlation function 89, 93, 105, 113, 114, 119, 134, 139, 164–169, 174, 177
  see also Pandharipande-Bethe functions (P.)
Correlation line *see* Dynamical correlation line
Correlation operator 90, 95–102, 104, 105, 117, 119, 182–187
Correlations
  Jastrow 93, 106, 109, 118–120, 130, 139, 166, 179, 186, 188
  long-range 134–136, 138, 140, 142, 156, 157, 162, 165, 166, 175, 188
  short-range 95, 111, 139, 142, 162, 164, 166, 178, 187
  state dependent 90, 94, 108, 115, 121, 125, 165, 169, 173, 182–194
Coulomb repulsion in Stellar evolution 202, 203
Coupled channels 184, 186
Crab nebula 203, 205
  pulsar 205, 215, 234

Deep inelastic processes 63
Deep inelastic scattering 23
Defect wave function 101
Δ-resonance 60
Diagrammatic cluster expansions 89, 94, 97, 124–142, 143
  Fantoni-Rosati (F.R.) scheme 89, 132, 140–142
  Gaudin-Gillespie-Ripka (G.G.R.) scheme 89, 125–129, 139–142, 150, 152, 153, 194
  Power-Series method (P.S.) 129–142, 154, 156, 160, 162
Diagrammatic expansion rules 89, 131–134, 141
Dilepton production 1, 25, 27, 33, 38
Dilepton spectrum 4, 11, 22
Dimensional counting 25, 27
Dimuon events 72
Dispersion in nuclear matter 89, 116–122, 140, 190, 192, 224
Distribution functions 89, 102–105, 108, 111–113, 120, 125, 130, 134, 141, 142, 148–168, 172, 174, 186
  see also Quark
Drell-Yan mechanism 26, 27, 33, 34
Dressed (or renormalized) subdiagram, definition of 153
Dynamical correlation line, definition of 125

e^+e^- annihilation 23, 38
Empirical constituent scattering 30
Equation of state
  for neutron star matter 233
  in heavy-ion collisions 237
    see also Nuclear equation of state
  compressional energy contribution 237, 241, 242–244
  thermal energy contribution 237, 241, 244–247
Event structure 6, 22
Exchange line *see* Statistical correlation line
Exchange loops 89, 129–131
Exotic nuclei 214
External point, definition of 125

Factorized Iwamoto-Yamada expansion *see* Cluster development of energy expectation values
Fantoni-Rosati scheme *see* Diagrammatic cluster expansions; Hypernetted-chain theory
Fermi cancellation 89, 134–136, 138
Fermi-chain approximation (F.C.) *see* Hypernetted-chain theory
Fermi insertions 89, 136–140
Fermi motion 35
Fermi pressure 201–203, 210
  of electrons 202, 210
  of nucleons 201, 202, 210
Fermilab: Fermi National Accelerator Laboratory (F.N.A.L.) 41, 50, 61, 62
Fermilab-L.B.L.-Hawaii-Michigan collaboration 66
Fermi-Percus-Yevick approximation (F.P.Y.) *see* Hypernetted-chain theory
Feynman scaling *see* Scaling
F.H.N.C. theory *see* Hypernetted-chain theory
Final state interactions 30
Fire sausage 15
Fireball 15
  see also Specialized models for high-energy heavy-ion collisions
Firestreak *see* Specialized models for high-energy heavy-ion collisions
First-order phase transitions in neutron stars *see* Neutron star
Flavour 24, 29, 53, 72, 73, 77

Gammel-Christian-Thaler potential *see* Two nucleon potential
Gammel-Thaler potential *see* Two nucleon potential
Gargamelle (G.G.M.) 41, 47, 50, 56, 70, 72
Gaudin-Gillespie-Ripka scheme *see* Diagrammatic cluster expansions
Gauge boson production *see* Z^0, $W^\pm$ production; Gluon
Gauge theories 22, 43, 60, 72, 75–77
Georgi-Glashow model 44
G.I.M. model 43, 44
Glitches 205, 206, 226, 234, 235
Gluon 2, 3, 16, 22, 23, 29, 32, 33, 37
Gluon jets *see* Jet
G-matrix 92, 116, 117, 173
Goldstone linked cluster expansion 92, 119
Gravitational collapse 201–203, 207, 235

Hadronic models 12
Hadronic processes 41, 70
Hamada-Johnston potential *see* Two nucleon potential
Hard spheres 169, 170, 181, 268, 270
Harvard-Pennsylvania-Wisconsin (H.P.W.) collaboration 41, 50, 56, 58, 60
Harvard-Pennsylvania-Wisconsin-Fermilab (H.P.W.F.) collaboration 41, 62, 64
h-bond, definition of 143
Healing in nuclear matter 114, 166, 168, 175, 176, 184, 185, 189–192
Heavy leptons 44–46, 50
Heavy-ion collisions 90
  high energy theory of 237–284
  comparison of theoretical methods 239
  non-relativistic many body equations of motion 268–270
Helium
  liquid ^{3}He 91, 102, 107, 156, 163, 179–181, 188
  liquid ^{4}He 181
Higglets 77
Higgsons 77, 78
Homework potential *see* Two nucleon potential
Homework problems 173, 193, 194
Hypernetted-chain theory
  for Bose systems 89, 142–149, 154, 158, 165–167, 180–182
  for Fermi systems (F.H.N.C.) 89, 94, 139, 149–182, 193, 194, 220, 222
  Fantoni-Rosati scheme (F.R.) 89, 142, 149–158, 160–164, 167, 172, 174, 181, 186, 187, 190, 194

Fermi chain approximation (F.C.) 156, 158, 169, 170, 177, 178
Fermi-Percus-Yevick approximation (F.P.Y.) 156, 158, 170, 171, 174
F.H.N.C. calculations for central potentials 89, 168–182
Krotscheck-Ristig scheme (K.R.) 89, 142, 150, 151, 158–165, 181, 187, 188, 194
Lowest-order approximation (L.O.) 156, 158, 169, 170, 172, 177, 178
Lowest-order constrained variation method (L.O.C.V.) 168, 169, 185, 222, 224

Inclusive cross-section 41, 42, 70, 83, 84
Inclusive production 1, 5, 27, 30, 35
Independent emission model (I.E.M.) 14, 16, 20–22
Interatomic forces in stellar evolution 202
Internal point, definition of 125
Irreducibility 89, 129–131
Isospin structure 42, 53, 56, 70, 73, 74, 77, 79, 83
Iwamoto-Yamada expansion *see* Cluster development of energy expectation values
Iwamoto-Yamada potential *see* Two nucleon potential

Jackson-Feenberg form (J.F.) *see* Jastrow energy
Jastrow correlations *see* Correlations
Jastrow energy 89, 105–124, 140, 170
alternative forms for the kinetic energy 89, 108–113
see also Cluster development of energy expectation values
Clark-Feenberg (C.F.) 110–112, 129, 158
Clark-Westhaus (C.W.) 109–112, 128, 129, 170–181
Jackson-Feenberg (J.F.) 110, 111, 129, 158, 170, 173–181, 190
Pandharipande-Bethe (P.B.) 109, 111, 112, 120, 129, 158, 169, 172–181, 185, 190
Jastrow theory 89, 93, 94–105, 164, 167
comparison with Brueckner-Bethe theory 89, 113–124, 168–182, 189–194
see also Jastrow energy
Jet 2, 6, 15, 18, 24, 25, 27, 29, 30, 31, 35, 38
away side jet 6, 9
gluon jet 4
same-side jet 8

Kinetic energy, alternative forms *see* Jastrow energy
Krotscheck-Ristig scheme (K.R.) *see* Hypernetted-chain theory

Landau parameters 166, 188
Leptonic processes 41, 69, 73
Long-range correlations *see* Correlations
Lorentz structure (V,A,S,P,T) 42, 53, 55, 59, 63, 64, 66, 68, 71–74, 76, 77, 79, 80, 82, 84
Los Alamos (L.A.M.P.F.)-U.C.I. experiment 41, 55
Lowest-order approximation (L.O.) *see* Hypernetted-chain theory
Lowest-order constrained variation method (L.O.C.V.) *see* Hypernetted-chain theory

Main sequence stars 202
Massive states 4, 9, 18, 20
Mean free path *see* ν mean free path
Meson-nucleon interactions 90, 91
Monopole states 90, 243
m_T *see* Transverse mass
Mueller-Regge optical theorem 14, 19
μ (Muon)
External Muon Identifier (E.M.I.) 66
no-μ events 49, 50
Multiperipheral models 14
Multiple scattering 35
Multiplicity 6, 12

Neutral currents (N.C.) 41–80, 212
ν (Neutrino)
background 49, 58
beam 45, 46, 49, 50, 57, 62
mean free path 212–214
opacities 201, 204, 211–214
radiation 203, 211
Neutrino-electron scattering cross-section 212
n (Neutron)
background 50, 58
drop 201, 214, 220–222
Neutron star 91, 194, 201, 203–206
baryonic abundances 229
cooling 201, 211, 214
crust 201, 214, 218–222, 234
equation of state 233
first-order phase transitions 220, 221
free energy 201, 202, 209, 211
masses 201, 202, 207–211, 232–235
nuclear physics of 201–236
sizes 201, 202, 232–235
Nodal diagram, definition of 144
Nuclear compressibility 238
coefficient 243, 244, 249
